Working Paper

“Institutional Common Ownership and Executive Mobility”

Supervisor: Prof. José Azar (IESE & UNAV)

Exploiting the BlackRock–BGI merger (2009) as a quasi-natural experiment, I examine how institutional common ownership shapes C-suite executive mobility. Using difference-in-differences and event study designs on a **27.8-million-row firm-pair panel** linking 13F institutional holdings (58.9M obs.), ExecuComp data (31,959 executive-years), and Orbis director moves (24,716 transitions), I find that common ownership *increases* mobility through within-network labor market channels—rejecting the shadow non-compete hypothesis. Robust across 17 pair-level checks, 5 placebo tests, and high-dimensional fixed effects.

Presented at: IESE MWOW 2026 (Madrid, May 21–22).
